

GLASS BRIDGE

MIRASAKA, MIYOSHI, HIROSHIMA

2007

This project is located at the Haizuka dam construction area and as one of the Haizuka Earthworks Projects. We are commissioned from Mirasaka town, Hiroshima prefecture to design the guardrail and pavement for the newly large bridge over the dam lake in collaboration with local people. As a result, we put over 200 sheets of glass panel (300×1800mm) to the outside of guardrail. Furthermore, collaborating with Japanese artist, Hiroshi Fuji, we design the glass panel as an Encyclopedia of living things in haizuka area. Therefore, "Glass bridge" is a project as landscape design, as a small museum, as a communication art, and as architecture.

location	:Mirasaka,Hiroshima
client	:Ministry of Construction
principal use	:bridge railing
design period	:1997.08~2002.03
construction period	:1998.03~2007.03
architect	:Hideki Yoshimatsu + archipro
project architect	:Hideki Yoshimatsu, Michio Maeda
collaboration	:Hiroshi Fuji
